Cloud Accounting

*“Life is like accounting, everything
must be balanced.”*

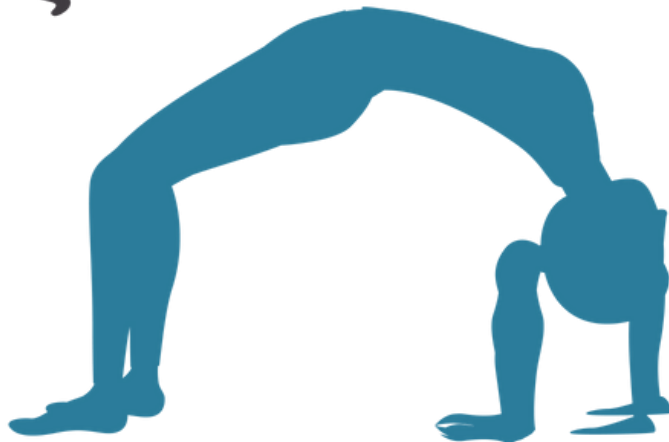

Reduced Costs

Taking your business to cloud opens a wide array of opportunities and new technologies. These new technologies such as Artificial Intelligence (AI) supplements the position of your current bookkeeper. Apps have the ability to use AI to read documents, input data and streamline your bookkeeping processes, saving you money.

Flexibility

Flexibility is one of the major benefits of taking your business to the cloud. Most cloud platforms can run off Windows, Mac, iOS and Android operating systems giving you the flexibility and mobility to work practically anywhere! There are also many options and add-ons to support you and your business, so we can find the right solution for you.

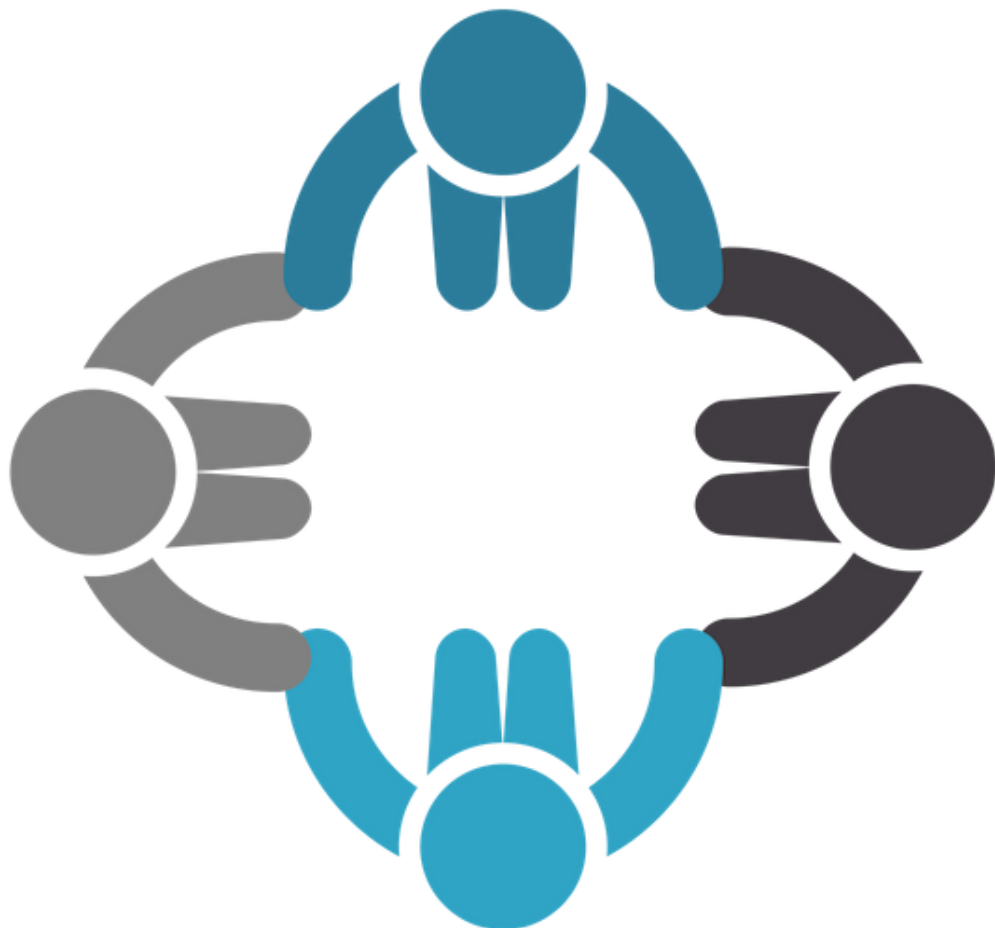

Security

Saving your data on the cloud is more secure than leaving your financial information stored behind your desk on a bookshelf. Our preferred accounting platform requires two-step authentication to login and has many other security features. Cloud apps also update frequently keeping on top of any security risks that may arise. Keeping your financial information safe and secure is paramount.

Collaboration

Are you sick of waiting for your accountant to provide feedback on your business, months after the transactions even occurred? With the flexibility and mobility of cloud, your accountant or business advisor can have access to your information at their fingertips, giving you the competitive advantage of up to date and proactive information.

Disaster Recovery

Everyone starts out with the greatest endeavours to save backups of our financial information on separate hard drives stored somewhere safe and secure. But who actually continues this for the life of the business? There is no possibility of a local storm, flood or fire affecting your documents and financial information that has been securely saved to the cloud.

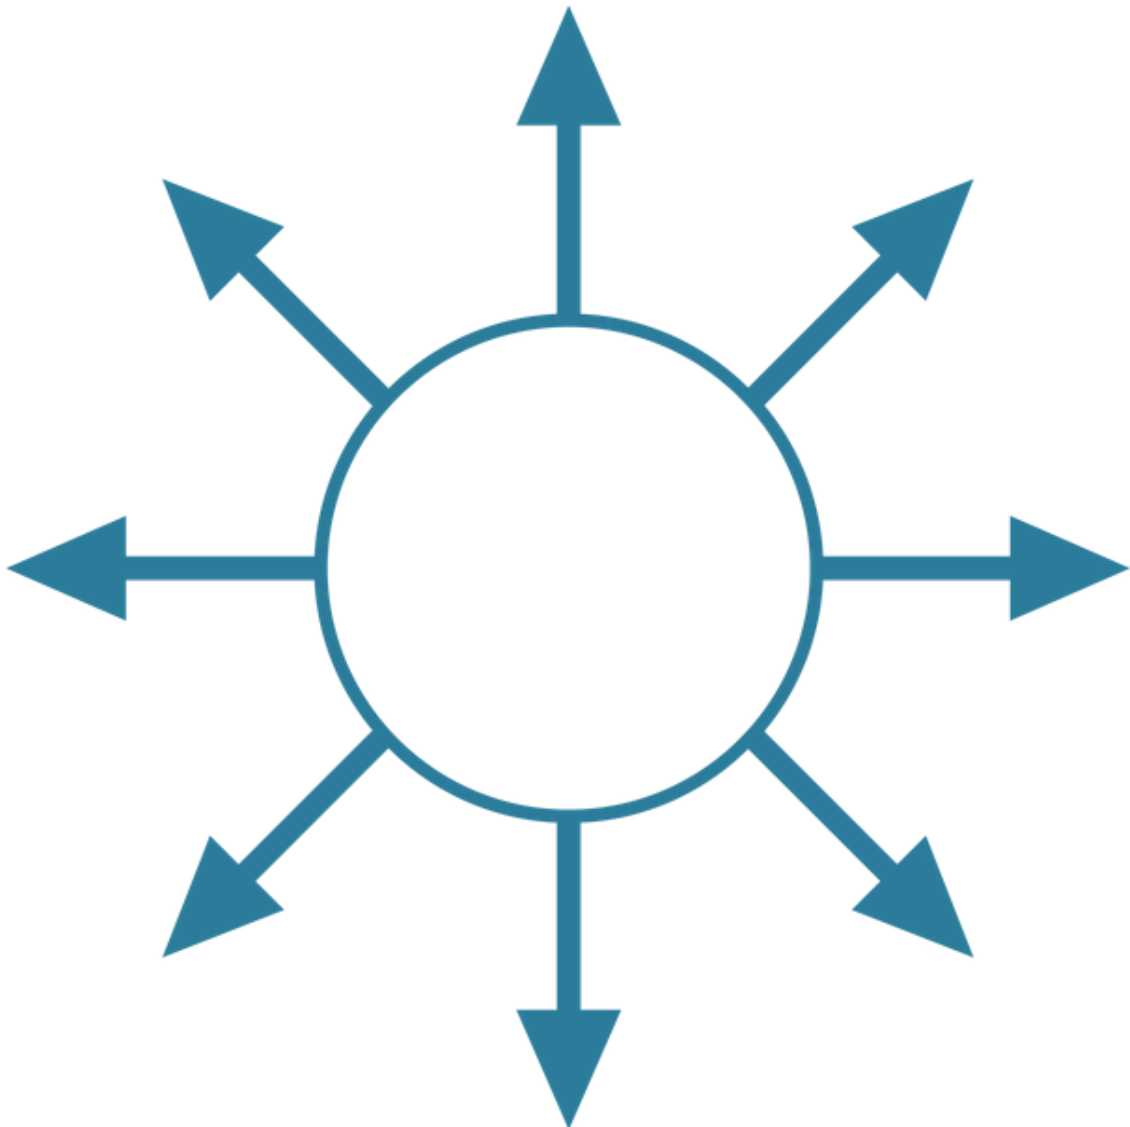

Traceability

With the streamlining of your business processes comes the transparency between employees and data input. Alongside this, data moving from system to system, editing and deletion are all tracked for efficient traceability should something go wrong, giving you piece of mind.

Transparency

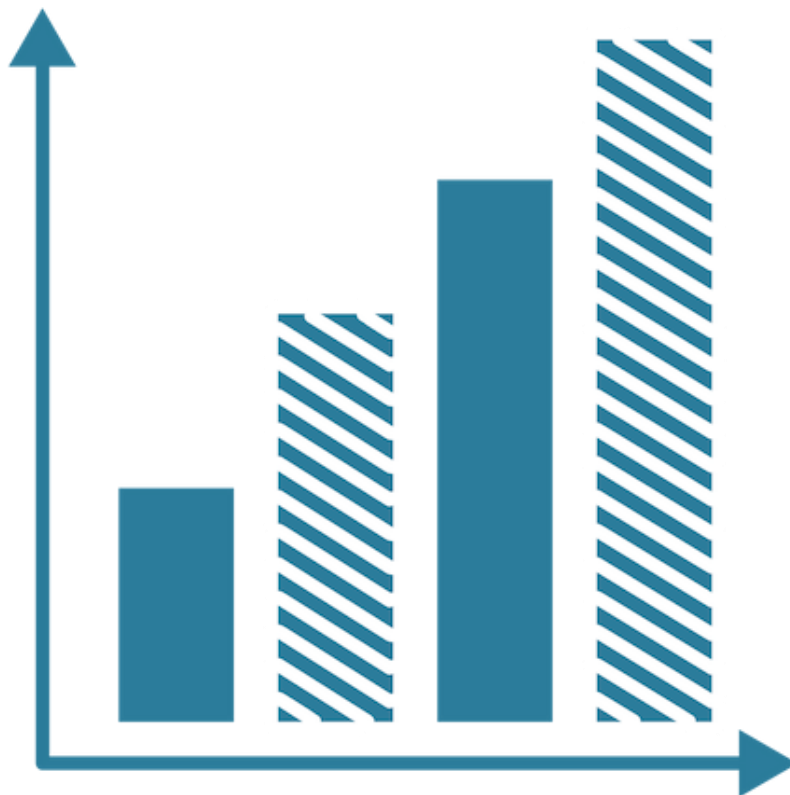

Options

With cloud technology, options are literally endless. Every day new and improved technologies are released into the cloud app marketplace. This gives you the opportunity to utilise and adapt apps to fit your business perfectly.

Scalability

Do you only have 3 employees at the moment, but looking to scale to something much larger? Cloud platforms and apps have many different plans to suit your business, whether big or small. You can start off with the smallest plan and grow your app subscription with your business. No need to buy a program that your business may out grow and continually need to update editions, cloud continually updates and expands to suit your needs at any given time.

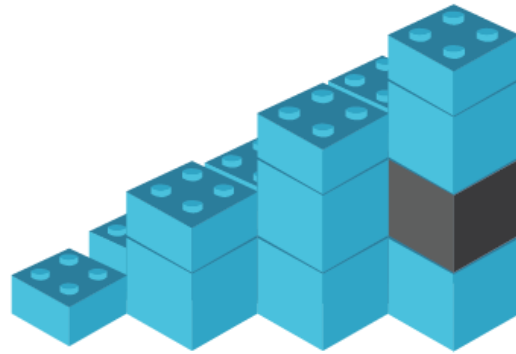

Not sure if cloud is for you?
